

EXERCISE-1 **Creating and Managing Tables**

OBJECTIVE

After the completion of this exercise, students should be able to do the following:

- Create tables
- Describing the data types that can be used when specifying column definition
- Alter table definitions
- Drop, rename, and truncate tables

NAMING RULES

Table names and column names:

- Must begin with a letter
- Must be 1-30 characters long;
- Must contain only A-Z, a-z, 0-9, _, \$, and #
- Must not duplicate the name of another object owned by the same user
- Must not be an oracle server reserve words
- 2 different tables should not have same name.
- Should specify a unique column name.
- Should specify proper data type along with width
- Can include "not null" condition when needed. By default it is 'null'.

The CREATE TABLE Statement

Table: Basic unit of storage; composed of rows and columns

Syntax: 1 Create table table_name (column_name1 data_type (size)
column_name2 data_type (size)....);

Syntax: 2 Create table table_name (column_name1 data_type (size) constraints,
column_name2 data_type constraints ...);

Example:

```
Create table employees ( employee_id number(6), first_name varchar2(20), ..job_id varchar2(10),
CONSTRAINT emp_emp_id_pk PRIMARY KEY (employee_id));
```

Tables Used in this course

Creating a table by using a Sub query

SYNTAX

```
// CREATE TABLE table_name(column_name type(size)...);
```

```
Create table table_name as select column_name1,column_name2,.....column_namen from
table_name where predicate;
```

AS Subquery

| | |
|-------------|--------|
| Highest sal | Number |
|-------------|--------|

LOCATION TABLE

| NAME | NULL? | TYPE |
|----------------|----------|-------------|
| Location_id | Not null | Number(4) |
| St_addr | | Varchar(40) |
| Postal_code | | Varchar(12) |
| City | Not null | Varchar(30) |
| State_province | | Varchar(25) |
| Country_id | | Char(2) |

1. Create the DEPT table based on the DEPARTMENT following the table instance chart below. Confirm that the table is created.

| Column name | ID | NAME |
|--------------|--------|----------|
| Key Type | | |
| Nulls/Unique | | |
| FK table | | |
| FK column | | |
| Data Type | Number | Varchar2 |
| Length | 7 | 25 |

Create table dept (id number (7) , name varchar2 (25));

2. Create the EMP table based on the following instance chart. Confirm that the table is created.

| Column name | ID | LAST_NAME | FIRST_NAME | DEPT_ID |
|--------------|--------|-----------|------------|---------|
| Key Type | | | | |
| Nulls/Unique | | | | |
| FK table | | | | |
| FK column | | | | |
| Data Type | Number | Varchar2 | Varchar2 | Number |
| Length | 7 | 25 | 25 | 7 |

Create table EMP (id number (7) , last_name varchar2 (25), first_name varchar2 (25), dept_id number(7));

3. Modify the EMP table to allow for longer employee last names. Confirm the modification.(Hint: Increase the size to 50)

Alter table EMP modify (last_name varchar2 (50));

4. Create the EMPLOYEES2 table based on the structure of EMPLOYEES table. Include Only the Employee_id, First_name, Last_name, Salary and Dept_id coloumns. Name the columns Id, First_name, Last_name, salary and Dept_id respectively.

```
create table EMPLOYEES 2 (id number(4), last-name  
varchar(25), first-name(23), salary number(7), dept-id number(7));
```

5. Drop the EMP table.

```
Drop table EMP;
```

6. Rename the EMPLOYEES2 table as EMP.

```
Alter table EMPLOYEES2 rename to EMP;
```

7. Add a comment on DEPT and EMP tables. Confirm the modification by describing the table.

Comment on table dept is 'this is department table';

Comment on table EMP is 'this is employee table';

8. Drop the First_name column from the EMP table and confirm it.

```
Alter table EMP drop column first-name;
```

| Evaluation Procedure | Marks awarded |
|----------------------|---------------|
| Query(5) | |
| Execution (5) | |
| Viva(5) | |
| Total (15) | |
